KEYLECTROLYTES™

*ELECTROLYTE REPLACER FOR
BROILER CHICKENS, STARTER PULLETS AND LAYER HENS.*

PRESENTATION: White to off-white free flowing powder with typical mineral odour.

ACTIVE CONSTITUENTS: Each kg contains:

SODIUM IONS	134 g
POTASSIUM IONS	258 g
BICARBONATE IONS	361 g
CHLORIDE IONS	247 g

PROPERTIES: KEYMIX® KEYLECTROLYTES™ is an economical, effective and convenient way to replace electrolytes, maintain the correct fluid balance and assist in the prevention of dehydration.

Sodium, potassium cations and chloride anions are closely related metabolically. They are the major electrolytes or body salts responsible for control of osmotic pressures, acid-base equilibrium in body fluids and the maintenance of water metabolism and hydration within the tissues. In addition, bicarbonate ions maintain sufficient alkaline reserves (buffering capacity) in the blood and body fluid to ensure normal physiological and metabolic function is maintained.

The maintenance of fluid balance and prevention of dehydration is important in today's poultry industry.

DOSAGE AND ADMINISTRATION:

- HIGH AMBIENT TEMPERATURE:**
Use 2 kg KEYLECTROLYTES™ to 900 L (20 g to 9 L) of drinking water for a period up to 14 days. Duration of KEYLECTROLYTES™ administration will depend on the extent of bird dehydration and the return to normal dropping form and consistency (normal dropping - formed and showing white from salts).
- PERIODS OF HEAT STRESS:** Use up to 4 kg of KEYLECTROLYTES™ to 900 L of drinking water (40 g to 9 L) to overcome dehydration and to replace vital electrolytes and fluids, to help restore health and vitality of birds.

CAUTION: Do not administer to any single flock for longer than 14 days.

WITHHOLDING PERIOD: (MEAT AND EGGS): NIL.

POISONS SCHEDULE: NOT APPLICABLE.

REGULATORY STATUS: **Australia:** END (Excluded nutritional or digestive product)
New Zealand: Exempt

PACK SIZES: 2.5 kg, 25 kg.
